Fall 2018

We created a border pane and two gridpanes and added it to the border pane. One gridpane contained the Critter World and the other contained the controls. For the background, we included a picture of Professor Nandakumar. We tried to make the controls pretty compact so that way the user could have most of the screen available to view the world. We also added a reset button in the controls, so that way you don't have to quit the program and restart it every time. There's also a button that starts music and stops the music, incase the use prefers to play without the music. A problem that occurred was that we struggled fitting the Critter World to adjust to different screen sizes and adjusting the shape sizes.
